Conclusions

- 1 Services from the Far East may stop at additional ports in the short term to ensure that vessel capacity is fully utilized and "open" amongst need. Additional calls especially in Middle East/IC, Mediterranean and Black Sea, after saving feeder options initially.
 - 2 Bigger ships offer opportunities for more transshipment in the longer term and more additional calls in general in order to maximize the utilization of assets deployed.
 - 3 Expect shipping lines to continue to be "flexible" to offer the greatest additional vessel capacity (early forward start and freight war) to lower feeder calls on East Coast routes. (Take port calls: "Disruptions" City Call, "Close shoring" / berthings etc.
 - 4 Longer term - increase in the incidence of transshipment will also requirement for larger feeder vessels, as vessels serving deep-sea will also not an increase in vessel size and volume.
- Less positively it would seem unlikely that the issue of checked tax will be allowed to continue too long - Expect East Coast trade to remain within a couple of months maximum.
