Big data analytics

- Information level
- Numbers are everywhere in our lives, and statistics is about turning these numbers into useful information on which we can take action
- Properly represented data are more than just numbers (trends, anomalies, etc...)
- Getting the right information at the right time is the key to act on a process level

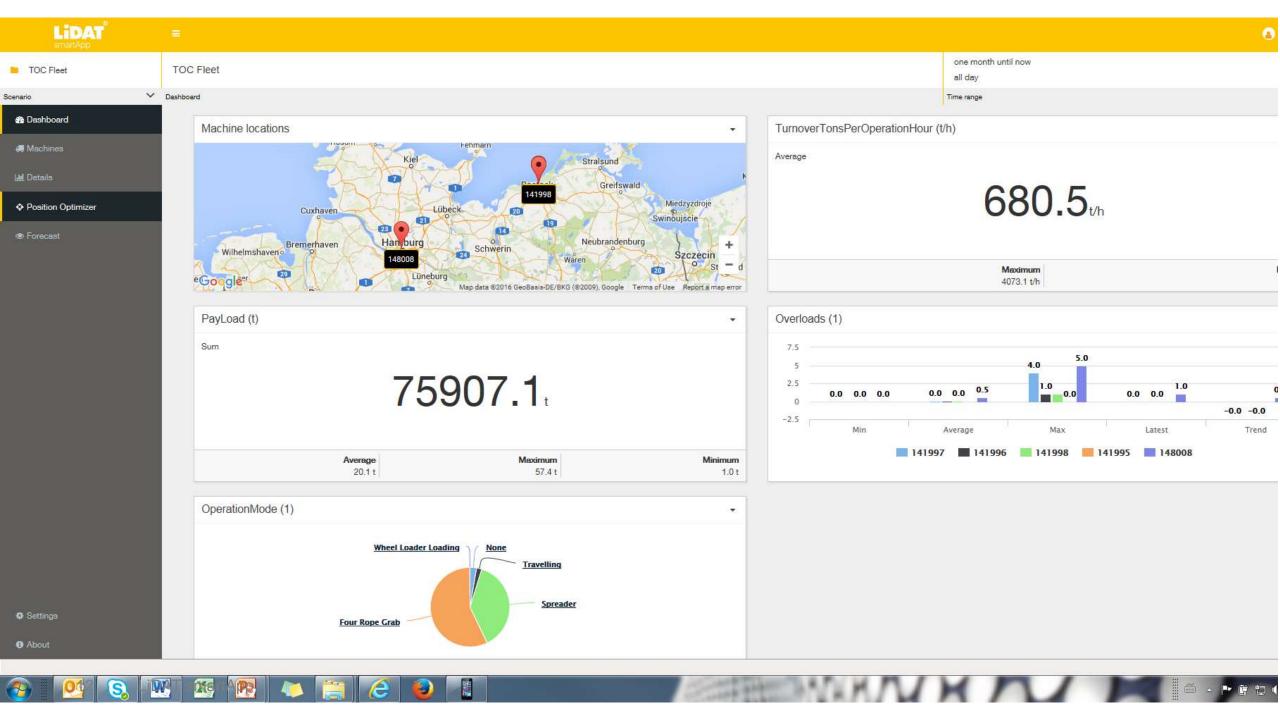

- Big data analysis
- To create benefits for our customers data have to be available on demand
- Today's question is not amount of data, but how to gain something useful out of it
- The art is to break down numbers to key performance indicators (KPIs)

- Optimise your performance with big data analytics
- Big data analytics examines large amounts of data to uncover hidden trends, anomalies and other insights
- With LiDAT® smartApp, it's possible to analyse your crane (operating and performance) data and get answers from it almost immediately
- That leads to immediate decisions. The ability to work faster gives ports a competitive edge they didn't have before
- Big data analytics helps to detect bottle necks and to identify new opportunities

Big data analytics

- Status reports
- Customise your dashboard (KPIs)
- Monitor your cargo handling process in real time

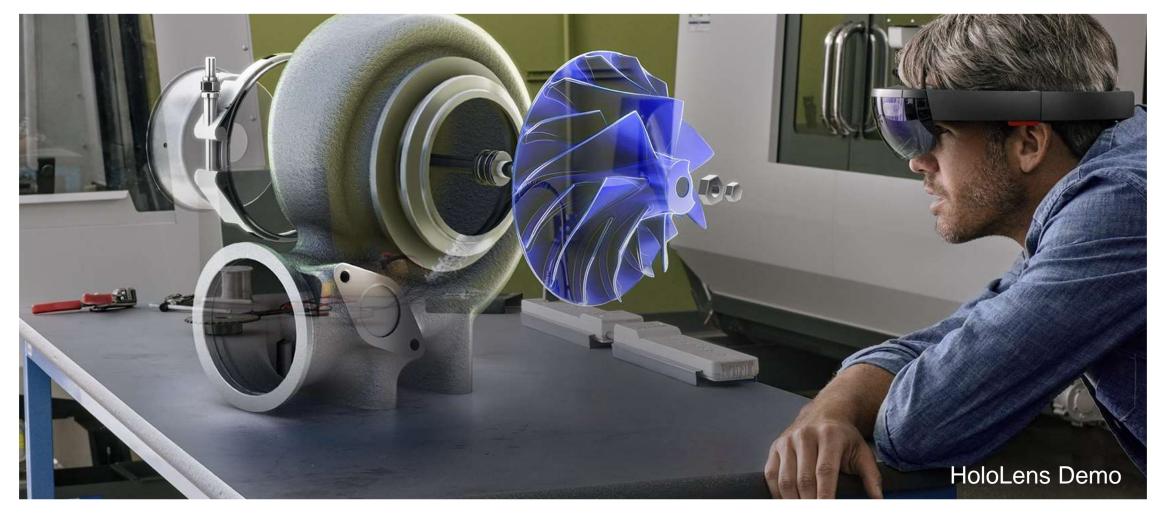

- Detailed view
- In depth analysis
- Detailed view of variables over time, dependencies and distribution
- Compare multiple cranes

- System integration
- SmartApp calculates forecasts
- SmartApp proposes optimisation measures
- Results can be sent to the crane/driver for immediate action

- Training & simulation
- Data can be used to create realistic training scenarios on a simulator
- Improve operating skills in a safe environment
- Simulator based training can be monitored

Virtual reality

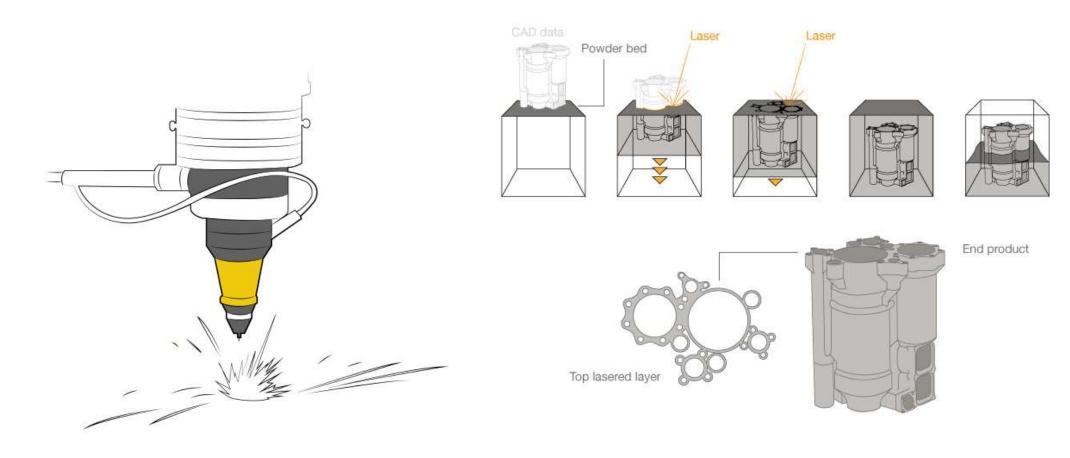

3D Printing

LIEBHERR

3D Printing

Laser travel across the titanium powder

Laser is metling the material layer by layer

Vacuums

LIEBHERR

3D Printing

Airbus recently flew with a 3D printed primary flight control component from Liebherr on a flight test A380
