Driving the future of Smart Port Transformation with Camco digital solutions

24 Oct, 2024

Camco Introduction

Why Digitalization is a MUST today

How Camco helps for smart transformation

Two examples for automation

ABBY ZHANG
CEO OF CAMCO ASIA

About Camco

CAMCO Shanghai Office

CAMCO USA Office

CAMCO UAE Office

CAMCO Australia Office

25 Years The longest history

CAMCO established in 1999, with 288 employees becomes the biggest company in terminal automation. CAMCO is the most stable technology company guarantee to provide long term services for her supplied systems.

5 M&S teams The Efficient Service

With five M&S teams located in Belgium, Abu Dhabi, Shanghai, Los Angels and Australia, CAMCO provides the 24/7 full time efficient maintenance service globally.

300+

Biggest Project Reference

More than 300 container terminals worldwide installed Camco automation systems, it makes Camco the global leader in our industry with the richest experience and knowledge for all types of projects. And same time all the new technology developed by CAMCO are proved.

Innovation Focus

With a 30 engineers R&D team, CAMCO never stopped innovation, it guarantees the customers of CAMCO have always the most advanced technology in the industry.

Design and produce own hardware In-house engineered Solutions

Camco designs, develops and implements its own technologies. Unlike sales organizations or system integrators, we keep total control over our hardware and software, and support a long-term product strategy.

3000+ GATE & GRID KIOSKS 320+ CRANE OCR

Camco Presence in Asia

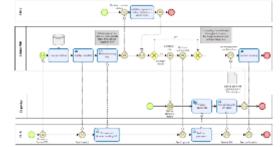

Why automatization and digitalization is a must today

6 reasons

Why digitalization is a must today

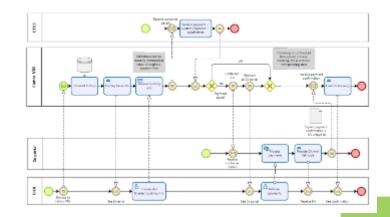

Increasing safety

Through digitalization, we can eliminate the need for workers in hazardous areas such as gates and under STS cranes, where many accidents with severe injuries frequently occur.

Removing human mistakes and frauds

Digitalizing processes introduces a structured and controlled system to your operations. Each process step is mandatory, with data validated through OCR technology. All human interventions by clerks are logged, and every step, along with related data and images, is archived for future use. This archived data facilitates efficient querying, retrieval, fraud detection, and analysis.

Why digitalization is a must today

Enhance Sustainability

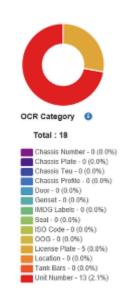

Having queues at the gates is very bad for the environment and increases the carbon emissions

Digitalizing gate processes reduces truck pass trough time to less then 60 seconds eliminating queuing at the gates

Enhancing productivity and maximizing efficiency

Digitalized processes generate analytical data through key markers. This data can be used to define KPIs, leading to faster and more efficient operations for trucks, trains, and vessels. More accurate checks result in better utilization of the infrastructure

Why digitalization is a must today

Increase operational control

Digitalization gives dashboards allowing to better control the operations.

Reduce costs

By digitalization and automation of the operation process, one can save on operational costs.

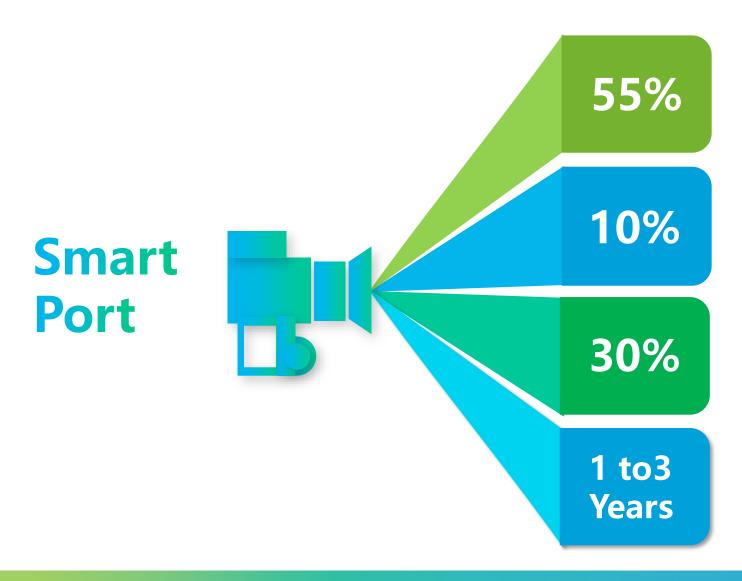

Workers in the gates, usually 20 people (3 shift of 8 people) can be replaced by making men less gates needing only 1 remote operator

With most of our customers, the crane OCR investment can be paid back in 1 year.

Why Smart Port Transformation

Operational cost saving

Some customers said that their operational cost saving up to 55% after the terminal upgraded with automation.

Carbon emissions

"The automated terminal not only increases the port's handling efficiency, but also reduces carbon emissions by up to 10 per cent," said Chen Wuyuan, president of Shanghai International Port Group.

Productivity

Some terminals tell the productivity increased round 30% after they upgraded their terminals with automation.

ROI

By increasing the productivity , eliminating the human mistakes and accidents, reducing the cost ,normally the terminals can get back their investment in automation in 3 years more or less.

How to Start the Smart Transformation?

In container terminals, both automation and digitalization work together to improve overall efficiency

Automation reduces manual labor Digitalization optimizes the flow of information and decision-making.

Smartification

With the advanced automation and digitalization technologies adopted from Camco, With the training and talent development, With continuous monitoring and optimization,, Ports can gradually evolve into smart ports.

Digitalization

Digitalization is the next step after automation in terminals.

Camco has developed two smart digital platforms :

- The Bridge
- RT Digital Twin

Automation

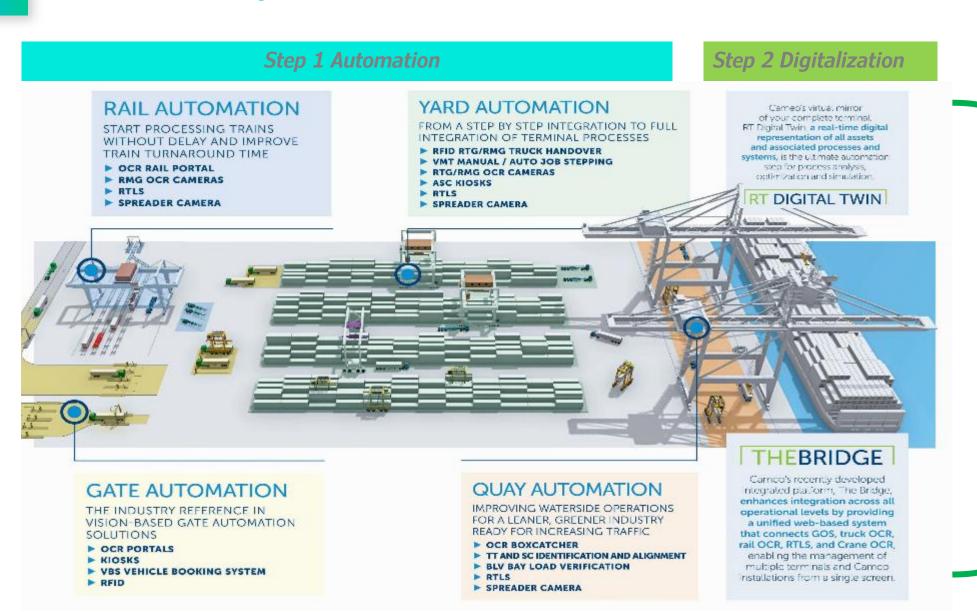

All automation solutions from Camco:

- Gate automation
- Quay automation
- Yard automation
- RTLS

How Camco helps for smart transformation?

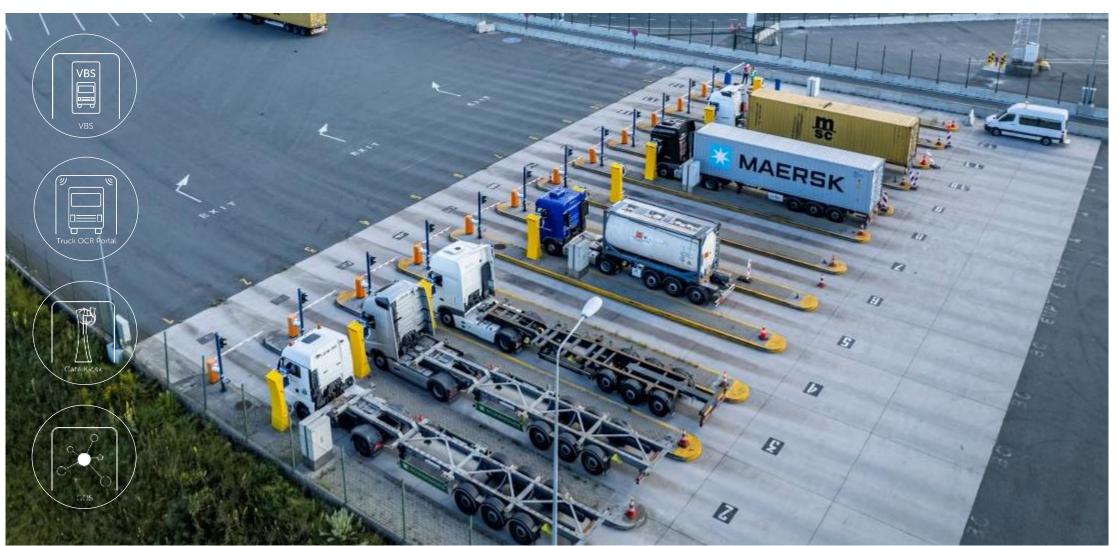

Smart Port Solutions

2 examples of automation: Auto gate

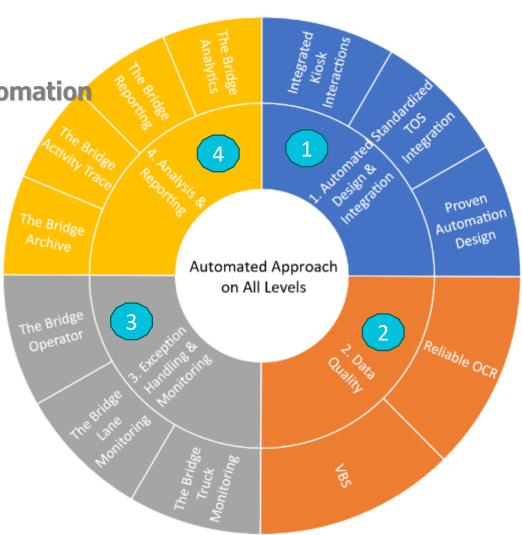

Auto-Gate

Gate automation / installing OCR cameras

In 4 golden rules to a structured approach of gate automation

- 1 Design: physical, business processes, KPI's
- Maximize Data Quality: use OCR&VBS
- 3 Implement Exception handling & monitoring
- 4 Analysis & reporting for feedback

Expected Performance

The KPI of a successful gate automation project should be:

Average time at an In-gate kiosk (*1): 70 seconds

Based on following processes:

- Truck driver identification by card
- Biometric check of truck driver (fingerscan)
- Input of appointment/booking number
- Confirming transaction overview screen
- Input of 1 seal number of 1 export container
- Selection of container position on chassis for 1 Import container

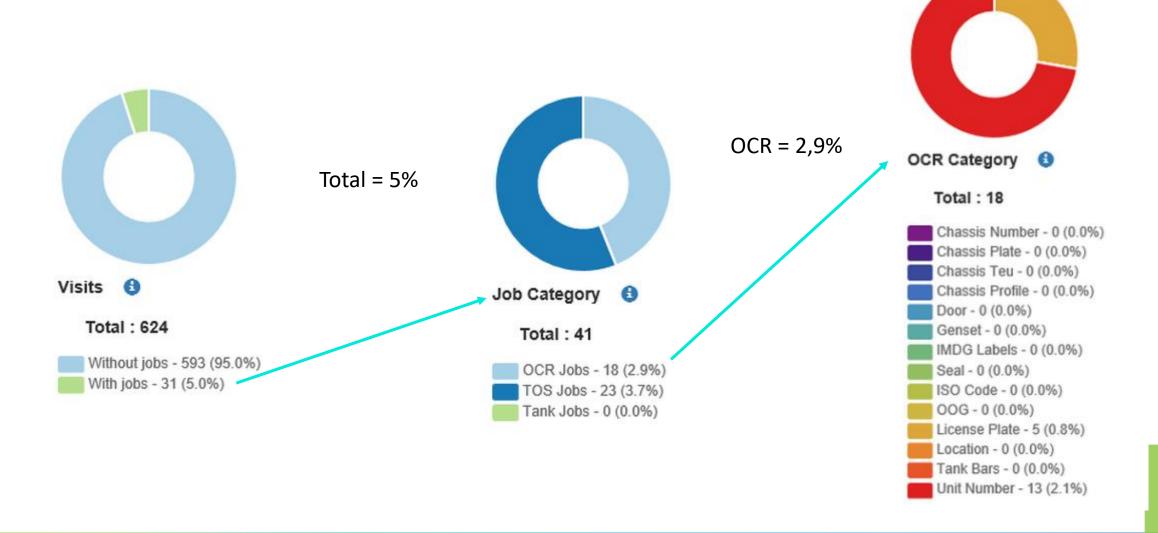

Number of GOS exceptions: 3% - 6%

Number of TOS exceptions: 2% - 4%

Expected Performance

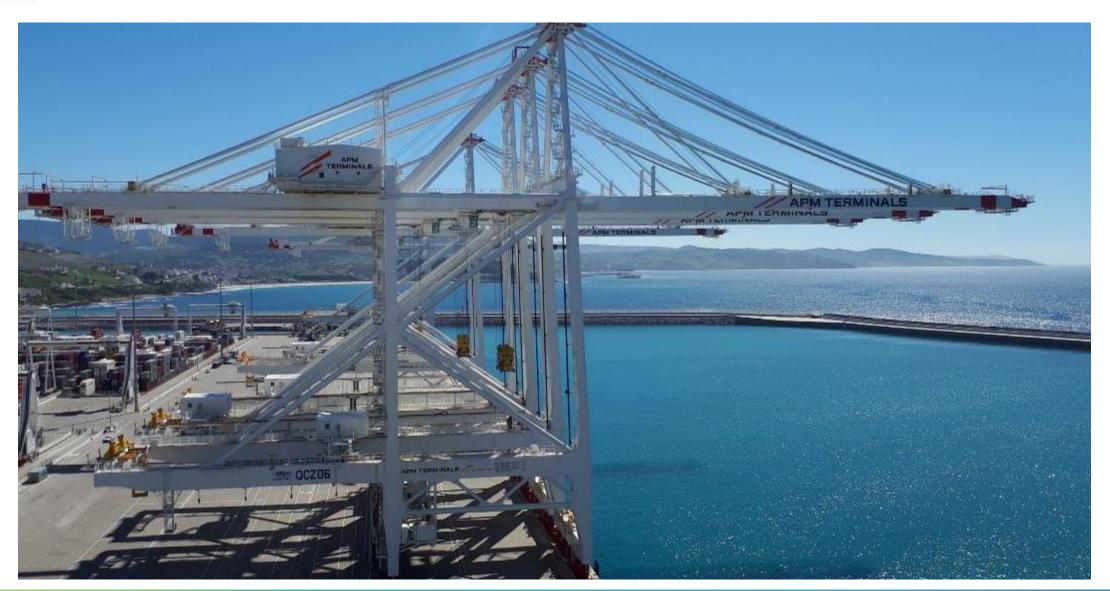

Typical job exception analysis (generated by dashboard)

2 examples of automation: Crane OCR

BoxCatcher Unparalleled STS crane OCR

Camco's Boxcatcher is the most advanced OCR camera system

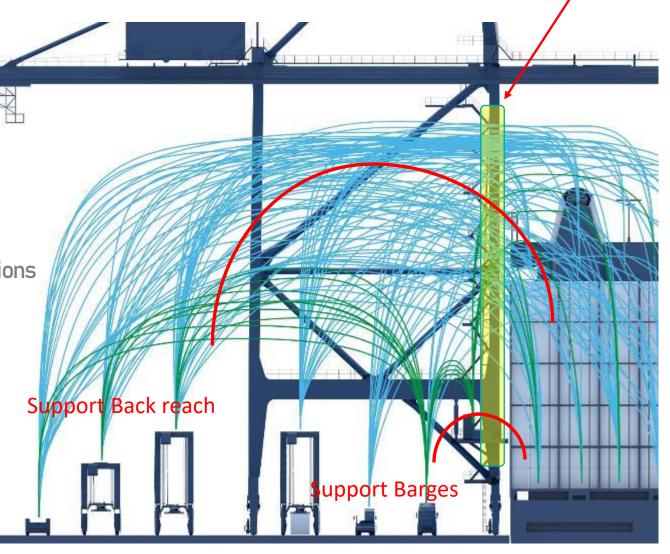

Project Reference Worldwide

Area BoxCatcher takes pictures

Supported moves

- Supports <u>under portal</u> beam moves
- Support <u>back reach</u> moves
- 20/40ft 2x40ft 2x20ft 4x20ft combinations

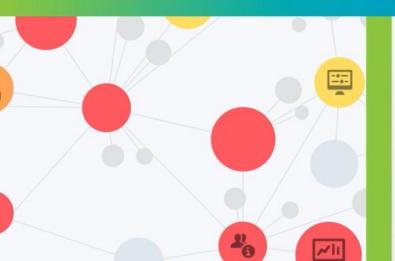

THEBRIDGE

Empowering container terminals through automation
